20259 Wi Fi Colour Wall Controller

9. Starting Up

- Attach the appropriate adapter to the universal power supply and insert the round tip of the cable from the power supply into the controller interface box.
- Locate the interface box in an appropriate place, making sure the infra-red eye on the front of the unit is not covered, and that you can point the handset towards the infra-red eye of the interface box.
- Remove the plastic tag from the bottom of the unit that is wedged into the battery compartment.
- Switch the unit on using the red ON button on the top right of the handset.
- Choose the colour required or adjust the brightness levels of your Wi Fi responsive product.

10.   Detailed Description

A discrete controller to allow carers, teachers and supervisors to override our other Wi Fi controllers. Designed for situations where a client has almost activated one of our Wi Fi controllers but has not exerted enough pressure on a switch button, or has missed the button. Intended to make sure a client receives a reward for their efforts, and so keep clients motivated and encouraged. Allows the carer to change and maintain the colour of Wi Fi products when they are with clients and so avoids the need to move, disturb or distract the client when they are focused on the activity. Includes the infra-red handset (with 1 CR2025 button cell battery included), controller interface and universal power supply. Requires a Wi Fi Controller (e.g. Deluxe 8 Colour Wirefree Controller) and Wi Fi responsive products such as bubble tubes, light sources etc.

This product does not require internet access.

This product is intended for use by supervisors, teachers, parents and responsible adults. This is not intended to be used by clients as this override is to be used to compliment ROMPA®'s Wi Fi Controllers that are intended for use by clients.

11.   Safety

- Always supervise the use of this product.

12.   Technical Specification

Size: Handset 8.5L x 5.1W x 0.7cmH
                Controller box 11L x 5.6W x 2.7cmH
                Universal power supply 8L x 5W x 6cmH (including UK adapter)

Weight: Handset 20g
                Controller box 70g
                Adapter 125g (including UK adapter)

Power: Controller box 12V DC @ 250mA
                Handset 1 x CR2025 button cell battery
                Adapter is UL/CUL approved with UK/EU/USA pins

13.   Installation

1.   Attach the appropriate adapter to the universal power supply and insert the round tip of the cable from the power supply into the controller interface box. UK, European and American pin adapters are included.
2.   Locate the interface box in an appropriate place, making sure the infra-red eye on the front of the unit is not covered, and that you can point the handset towards the interface box. The infra-red controller box can be wall-mounted as there are cut-out holes at each short side of the box. However, for flexibility of use, and given the compact nature of the controller box, you will probably find it more convenient to move the controller box around your Snoezelen® multi-sensory environment, especially if you are using the product with different clients who each enjoy using different products.
3.   Remove the plastic tag that is wedged into the battery compartment.
4.   Switch the unit on using the red ON button on the top right of the handset.
5.   Choose a colour or adjust the brightness levels of your Wi Fi responsive product.
6.   A small green LED light on the side of the controller box indicates that the product is operating successfully.

14. Care and Maintenance

- Handle this product with care. This product is not intended to be roughly handled.
- Use and store in dry, clean, indoor environments.
- Replace the battery as required with a new battery of the same specification. The battery compartment can be accessed by turning the handset over – the drawer is at the bottom short end of the controller. Pull the battery compartment drawer open to access the battery.
- The controller box does not contain any user-serviceable parts - do not open this box.
- Once this product is eventually exhausted, please dispose of it responsibly.

15. Troubleshooting

In the unlikely event of product failure, please check the following:

*Problem: **The Wi Fi receiving product does not respond to the handset***
• Check that the plastic tag has been removed that blocks the battery terminal in the handset
• Make sure that the infra-red controller box is plugged in and that the infra-red eye is not covered
• Make sure that you are pointing the controller towards the infra-red eye
• Change the battery as required
