

## Pentatonic Chimes – Set of 16, With Back Board for Wall-Mounting 23167

manufacturer instructions are included with the product when purchased – these are simply a summary

### Components:

Eye Straps  
X3

Pin Torx 25  
Driver Bit X1

10x38mm  
Secure Screw  
X6

Pair Large Red  
Beaters X1

Pair Small  
Beaters X2

**Please note:** Wall fixings / anchors are not supplied as these will depend on the construction of your wall. Please purchase appropriate fixings separately

### Before Installation

Choose a suitable location for the Chimes, bearing in mind the amount of space required in front of, and to the sides of them. Install the Chimes with 1m free space (from widest point) around them:

Consider the required height of the Chimes, i.e. who will be using them e.g. stood children, wheelchair users etc. and choose the most appropriate height.

Bear in mind the product weight: Total weight: 48kg

## Installation

1. Position the 2 sections of the Freechimes Symphony in desired location, according to correct Key stage height, this may require 2 persons.

2. Mark hole locations (X10) using the pre drilled holes in the Black HDPE Backboards

3. Drill hole locations (X10) according to your chosen fixings (frame fixings, wall bolts or chemical anchors) depending of the structure of the wall.

4. Fix through Backboards (X10) with suitable fixings (not supplied) in correct orientation and Key stage

5. Beaters can be fixed to Backboards or directly to wall depending on customers preference. 1 Pair at each end and one in the centre.

## Care & Maintenance

- Establish a schedule for regularly checking your outdoor musical instrument. Regularly inspect them and maintain them accordingly.
- Failure to adequately care for and maintain your products can affect the warranty.
- Do not alter or modify the product in such a way that the essential safety or sound of the product will be affected. Alterations and modifications may affect the warranty.
- Contact ROMPA® should spare parts or additional beaters be required.
- Contact ROMPA® should any repair or replacement be necessary.

### Aluminium Notes

Aluminium notes have an anodic coating that can't be peeled off or flake away.

Keep the notes clean with soapy water or a mild detergent solution followed by rinsing with clean cold water.

After drying, a good household wax spray polish can be used.

Grease and dirt deposits may be removed by using solvents such as white spirit in conjunction with a soft cloth or soft bristle brush.

Never use harsh abrasives to clean the notes.

As the notes are permanently exposed to some atmospheric weathering, they should be regularly cleaned – not less than four times a year.

### Steel Leg

Keep clean to ensure longevity.

Wipe clean with a mild detergent and rinse with clean cold water.

All cleaning solutions including acide based (exceptic hydrochloric acid) are suitable, as long as thoroughly rinsed with clean water afterwards.

Stainless steel polish can be used should you wish to cover any blemishes which may be caused over the years, either by misuse or accidental damage.

Stainless steel is very low maintenance but in external areas it is recommended to be checked for blemishes or surface scratches.

### Plastic Back Board (HPDE)

UV stable plastic is extremely low miantenance. Wipe clean with a mild detergent and rinse with clean cold water.

### EN1176 Requirements (applies to Children's Playground Equipment)

All children's playground equipment is subject to regular inspections and maintenance works.

Maintain your outdoor musical instruments according to the instructions supplied with the product to look after the product and to adhere to the warranty requirements.

*Excerpt from EN 1176-7:*

Section 7 - Inspection schedule

7.1. To avoid accidents, the operator has to make sure that an adequate inspection schedule is developed and adhered to for each playground. In such a schedule, all local conditions and manufacturer's indications that may have an influence on the necessary maintenance frequency, have to be taken into consideration.

The inspection schedule should list all parts, which have to be checked during the different inspections, and the inspection procedures.

7.2. If severe and safety-endangering defects are discovered during an inspection, they should be eliminated immediately. If they cannot be repaired or replaced at once, the respective equipment has to be excluded from use, e.g. by dismantling or closing it down. If an equipment component has to be removed, e.g. for maintenance works, all anchoring or foundations that remain in the ground have to be removed also or be made inaccessible by means of covers. The construction site should then be secured.

As stated in the standards, we recommend a weekly 'Routine Visual Inspection' of your playground. In cases of heavily used or high-risk (e.g. vandalism) playgrounds or if the age of the equipment requires more frequent checks, you may want to increase the frequency of these inspections to daily. An 'Operational Inspection' should be carried out every month and after 12 months at the latest you are required to carry out an 'Annual Inspection' (for best effect this should be completed after the winter months).

Records should be kept alongside these instructions of all actions taken as part of safety management. On the last pages of these maintenance instructions you are offered a Maintenance Record Sheet for the entry of your maintenance report results.

### **Daily/Weekly Visual Routine Inspection**

The routine maintenance of your outdoor musical instruments consists of preventative measures to maintain their level of safety and performance. On a 'Daily/Weekly Visual Routine Inspection' check for visible damage and loose parts:

- Are there any exposed foundations?
- Can you see sharp edges, broken, frayed or missing parts?
- Are components overly worn and torn?

Daily inspection is recommended for heavily-used or high-vandal-risk playgrounds or those that have already been in service for a certain period of time. Deal with all damages and defects as soon as these are found. Record all findings in the Maintenance Record Sheet (below).

### **Monthly Operational Inspection**

As for the Weekly Visual Routine Inspection, the following checks have to be carried out during the Monthly Operational Inspection:

- Are there any exposed foundations?
- Can you see sharp edges, broken, frayed or missing parts?
- Are components overly worn and torn?

The 'Monthly Operational Inspection' requires the following supplementary checks:

- Are all metal parts well connected and not worn down?
- Are all screwed connections and bolted joints tight? If not, please tighten them.
- Are all plastic and or/rubber components satisfactory?

Deal with all damages and defects as soon as these are found. Record all findings in the Maintenance Record Sheet (below).

### **Annual Inspection**

Carry out the 'Annual Inspection' after the winter or at least after 12 months. As well as the checks described above (Daily, Weekly, Monthly), the following checks are required:

- Are all foundations stable and the equipment well anchored?
- Replace joints that show severe corrosions or heavy wear and tear

Deal with all damages and defects as soon as these are found. Record all findings in the Maintenance Record Sheet (below). Copy the sheet or create your own for ongoing maintenance reporting.

Date of Inspection	Inspection (Daily/ Weekly/ Monthly /Annual)	Name of Inspector	Name of Instrument Inspected	Details of Defect Found	Action Taken	Date Defect Resolved
