

Weighted Balls (19317 & 17363)

The supplier of this product has confirmed the following:

- The balls are filled with distilled, demineralised water.
- They have a very strong shell (with a reticulation of welt and warp tissues). This has an elastic rubber layer ensuring a silent rebound and a pleasant texture.
- They will work from -30° to +50°
- They require no special care.
- Although very robust and durable, they should not be thrown purposefully against a point, as the balls may not withstand such use.
- The supplier states that the weighted balls are certified products. They adopt the principles and comply with Directive 2009/48/CE on Toy Safety, which includes criteria and provision for substances/compounds (under “Registration, Evaluation, Authorisation and Restriction of Chemical Substances” (REACH)” & European Chemicals Agency (ECHA) for control of hazardous substances).
